May 2010

iJOHN

This SIG provides more opportunity for sharing of experiences than the more typically structured classroom, lecture or formal setting.

Welcome to the fifth iDevices (iPhone, iPod and iPad) SIG Meeting

To go to the iPhone/iPod FORUM, click HERE

To find Apps that cost money but are FREE today, click HERE

Here are a few more things to know about the iPhone

Scroll to Top of Page -

In any application, Safari included, you can automatically scroll to the top of the page by tapping on the "top bar", which has the time, service bars, and battery. In Safari, this not only brings you to the top of the page, but also brings up the URL bar.

Save Any Image from Safari -

To save any image from the web to your camera roll, simply press and hold the image. A menu will appear asking "Save Image" or "Cancel". Once the image is in your camera roll, you can set it as your wallpaper.

Keyboard Update

There are several little changes to the keyboard. While these certainly won't change your iPhone experience, it doesn't hurt to know as much as possible about this extremely expensive little rectangle. That being said, here's what's new:
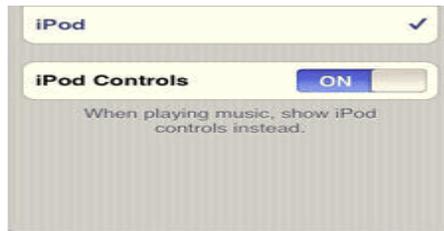

- Holding "." now gives you the option to type "..."

- Holding the quotation mark button (") allows you to chose whether you want straight or curved quotation marks.

- Holding the quotation mark also allows you to input this: ">>" or "<<"

iPhone Home Button

You can assign several functions to "double-clicking" your Home button. Simply go to Settings -> General -> Home Button. You should arrive at this menu:

| iPod | ✓ |
| iPod Controls | ON |

When playing music, show iPod controls instead.

You can choose whether double clicking your iPhone takes you to your "Favorite" contacts, or brings up iPod controls. While phone favorites is convenient, setting it to iPod mode allows you to start music no matter what else you're doing. In other words, it brings up iPod controls (play, pause, skip, volume) *over* whatever other application you are running (Safari included).

Setting iPod Controls to "On" means that if you already have music playing, double clicking the Home button will bring up iPod controls even if you have the Home Button set to "phone favorites".

Force Quit An Application

This process forces a frozen application (or just a frozen iPhone) to go back to the home screen. Most times the iPhone returns to the home screen automatically. If it doesn't, here what you can do:

Hold down the power and home button until "Slide to Turn Off" appears
Let go of both buttons
Press and hold ONLY the home button for 5-6 seconds
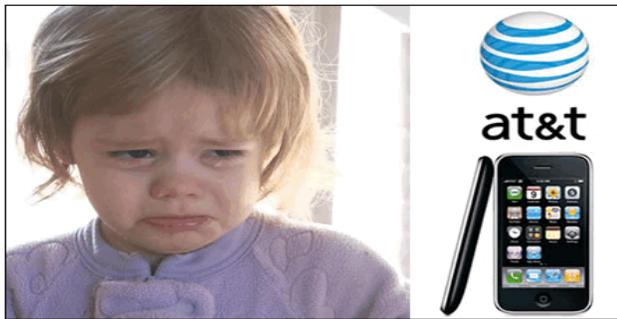

"What? no app for a lost iPhone?

There has been a lot of news about the new iPhone maybe coming out this summer

This is what a found prototype looks like:

Any special iPhone APPS that anyone has found?

----

iPad Information

Let's compare the iPad and the Stone

iPAD		STONE
