AtlasOS

- March 2024 optional update KB5035942
- Builds 22621.3374 22631.3374
- Copilot

you can ask Copilot in Windows (in preview) for help ten times when you sign in to Windows using a local account. After that, you must sign in using a Microsoft account (MSA) or a Microsoft Entra ID account (formerly Azure Active Directory (Azure AD)). To sign in, use the link in the dialog that appears in Copilot in Windows. If you do not sign in, some Copilot features might not work. To learn more, see [Welcome to Copilot in Windows](#) and [Manage Copilot in Windows](#).

- Lock screen

This update adds more content to your lock screen. Sports, traffic, and finance content will appear along with weather. To turn on this feature, go to [Settings > Personalization > Lockscreen](#).

Windows 11 Moment 5

- **Settings**

This update addresses an issue that affects the Settings app. It stops responding when you use it to remove Bluetooth devices.

- **Audio**

This update addresses an issue that affects USB audio. It fails on some processors. This occurs after you pause, play, or resume from sleep.

- **Taskbar**

This update addresses an issue that affects the Combine taskbar buttons and hide labels setting. The app labels in the taskbar sometimes do not have the correct length, which cuts off the label text. This occurs when this setting is set to "When taskbar is full" or "Never."

- **Voice Access**

You can now use all voice access features on multiple displays. These include number and grid overlays that, in the past, you could only use on the primary display. While you are using the grid overlay on a screen, you can quickly switch to another display. To do that, use the alphabet or NATO phonetic in your command. For example, "B" or "Bravo" are both valid for the display that is assigned that letter.

You can also use the "mouse grid" command to quickly move your mouse to a specific point on a display. For example, in the screenshot below, the command will be, "mouse grid A 114." Finally, you can use the drag and drop feature to move files, apps, and documents from one display to

Windows 11 Moment 5

- **Narrator**

You can now listen to a preview of the ten natural voices before you download them. See the Narrator section of the September 2023 update for the list. These voices use modern, on-device text-to-speech. Once you download them, they work without an internet connection. However, to listen to a preview, you need an internet connection. To add and use one of the natural voices, follow the steps below.

This update adds a new keyboard command to move between the images on a screen. Now, you can use the keys G or Shift+G to move

This update improves Narrator's detection of text in images, which includes handwriting. It also improves the descriptions of images. To use this feature, you must have an active internet connection. You must also turn on the setting to get image descriptions in Narrator settings. To try this experience, select an image and press the Narrator key+CTRL+D. forward or backward between images in Scan mode (Narrator key+space bar).

In Microsoft Word, Narrator will announce the presence of bookmarks and draft or resolved comments. It also tells you if accessibility suggestions exist when it reads text in the file.

You can now use voice access to open applications, dictate text, and interact with elements on the screen. You can also use your voice to command Narrator. For example, you can tell it to, "speak faster," "read next line," and so on. To get started, search for "voice access" in Windows search and set it up.

Windows 11 Moment 5

- **Windows Share**

This update changes the apps that appear in the Windows share window. The account you use to sign in affects the apps that are in "Share using." For example, if you use a Microsoft account (MSA) to sign in, you will see Microsoft Teams (free). When you use a Microsoft Entra ID account (formerly Azure Active Directory) to sign in, your Microsoft Teams (work or school) contacts show instead.

The Windows share window now supports sharing with WhatsApp in the "Share using" section. If you do not have WhatsApp installed, you can install it from the Windows share window.

- **Nearby Share**

This update affects how Nearby Share turns on and off. You can use quick settings or the Settings app to turn on Nearby Share. If you do and Wi-Fi and Bluetooth are off, Wi-Fi and Bluetooth will turn on to make Nearby Share work as you expect. If you turn off Wi-Fi or Bluetooth, Nearby Share turns off as well.

This update improves Nearby Share transfer speed for users on the same network. Before, users had to be on the same private network. Now, users must be on the same public or private network. You can use quick settings to turn on Nearby Share. Right-click a local file in File Explorer and choose "Share." Then choose to share to a device listed in Nearby Share in the Windows share window.

You can now give your device a more friendly name to identify it when sharing. Go to Settings > System > Nearby sharing. There, you can rename your device.

Windows 11 Moment 5

- Summary
- Locate specific data
- OneDrive soon
- Extract answers from files
- Create outlines, tables, FAQs
- Create new content
 - Use sales-enablement.docx to create sales pitch
 - Use proposal1 and proposal2 create table outlining differences in cost, milestones and data of delivery

• Settings > Accounts

The screenshot shows the Windows Settings application. On the left is a navigation pane with a search bar and a list of settings categories: Home, System, Bluetooth & devices, Network & internet, Personalization, Apps, Accounts (highlighted with a red box and a red circle with the number 1), Time & language, and Gaming. The main area is titled 'Accounts' and contains several settings options: 'Email & accounts', 'Family', 'Windows backup', 'Other users', 'Access work or school', and 'Passkey settings' (highlighted with a red box and a red circle with the number 2). Below the 'Accounts' section is a 'Related settings' section.

The screenshot shows the 'Accounts > Passkeys' page in Windows Settings. It features a heading 'Accounts > Passkeys' and a descriptive paragraph: 'Use the passkeys saved on this device to sign in to apps and websites without a password. Instead, sign in using your face, fingerprint, or PIN through Windows Hello.' Below this is a 'Saved passkeys' section with a search bar (highlighted with a red box) containing the text 'Search by app name, website, and more...'. Underneath, it says '2 passkeys found' and 'Sort by: Name (A to Z)'. A list of two passkeys is shown, each with a red box around it: 'google.com' with a redacted email address '@gmail.com', and 'login.microsoft.com' with a redacted email address '@hotmail.com'. Each entry has a three-dot menu icon to its right.
