Windows 11 Patch Tuesday

A new journey with Windows

We want to thank you for your loyalty as a Windows 10 customer. As end of support for Windows 10 approaches, we're here to support you on your PC journey.

Your PC is not eligible to upgrade to Windows 11, but it will continue to receive Windows 10 fixes and security updates until support ends on October 14, 2025.

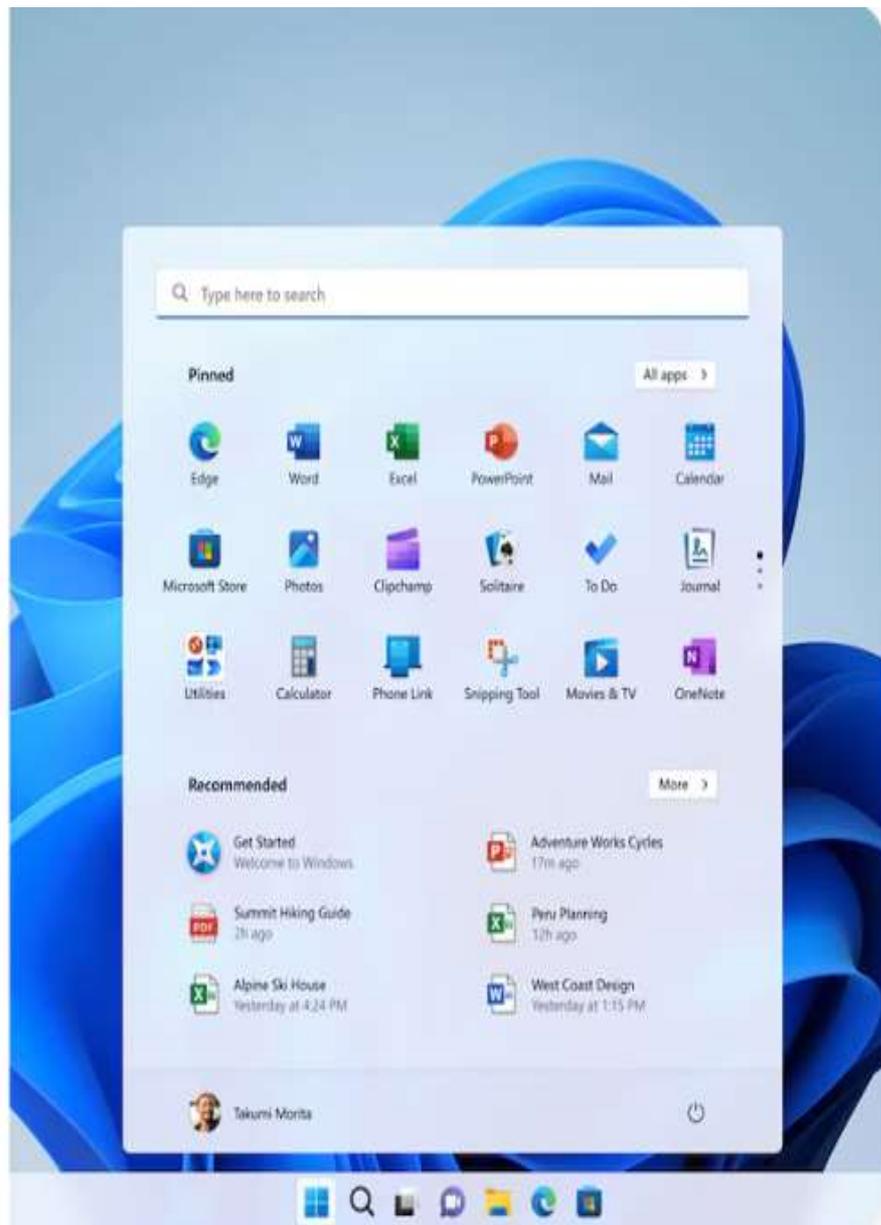

Learn more about how you can prepare for the transition to Windows 11.

- To run the System File Checker (SFC) in Windows, follow these steps:
- 1. ****Open Command Prompt as Administrator****:
 - - Press `Win + X` and select "Command Prompt (Admin)" or "Windows PowerShell (Admin)".
 - - If prompted by User Account Control (UAC), click "Yes".
- 2. ****Run the DISM Tool**** (optional but recommended for Windows 10/11):
 - - Type the following command and press Enter:
 - ````cmd`
 - `DISM.exe /Online /Cleanup-image /Restorehealth`
 - `````
 - - This step may take a few minutes to complete.
- 3. ****Run the System File Checker****:
 - - After the DISM tool completes, type the following command and press Enter:
 - ````cmd`
 - `sfc /scannow`
 - `````
 - - The scan will begin and may take some time. Do not close the Command Prompt window until the verification is 100% complete.
- 4. ****Review the Results****:
 - - Once the scan is complete, you will see one of the following messages:
 - - ****No integrity violations****: Your system files are intact.
 - - ****Corrupt files found and repaired****: The tool found and fixed issues.
 - - ****Corrupt files found but could not be repaired****: Manual intervention may be required.

System File Check

- trigger Windows to automatically download and install a newer Windows 11 or 10 feature update in case your current OS version is approaching the end of servicing status.
- When this update is installed, Windows may attempt to download and install feature updates to your device if it is approaching or has reached the end of support for your currently installed Windows version. Feature updates offer new functionality and help keep your device secure.
- After this update is installed, Windows may periodically display a notification informing you of problems that may prevent Windows Update from keeping your device up-to-date and protected against current threats. For example, you may see a notification informing you that your device is currently running a version of Windows that has reached the end of its support lifecycle, or that your device does not meet the minimum hardware requirements for the currently installed version of Windows.

Subject: Getting AI into the mix

Hey Lisa!

I wanted to follow up on that thing you mentioned earlier. These strategies could really help us stand out and connect with our potential clients better:

- Personalized Content Suggestions:** Tailor content to users based on what they're most interested in? AI can analyze their behavior on our website and suggest blogs, case studies, and products that are most relevant to them. It's like having a personal assistant for each visitor!
- Smarter Lead Scoring with Predictive Analytics:** Use AI to analyze lead behavior and predict which leads are most likely to convert. This means we can focus our marketing efforts on the most promising leads without spinning our wheels.
- Chatbots for Instant Support:** Implement an AI chatbot that can chat with visitors, answer questions about our software, and even qualify leads? It's like having a sales assistant available 24/7 to handle those leads when they're hot.

I'm thinking if we try some of this, it could take our marketing game to the next level.

First it was "Never10"

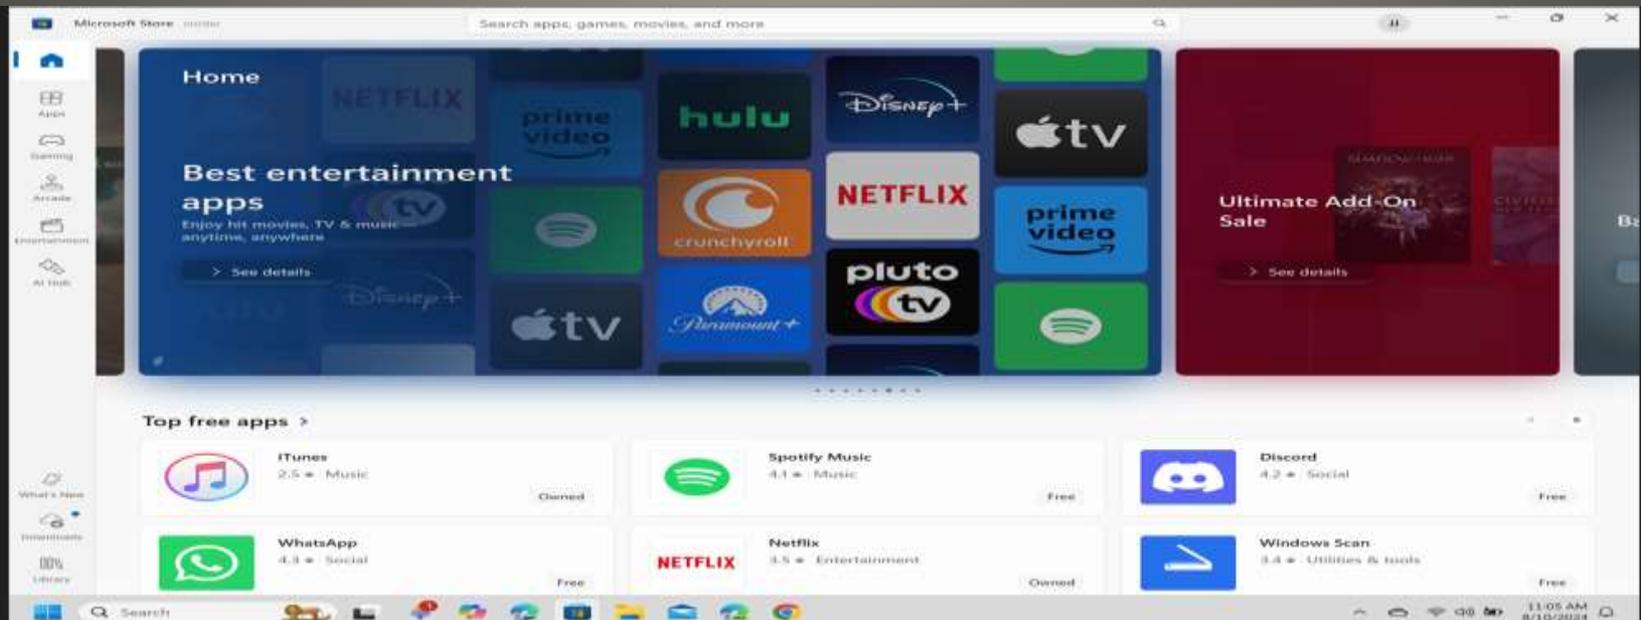

It began before Windows 10. Microsoft decided that it knew what was best for each of its users. So every Windows user was forced to move to Windows 10, whether or not it was best for them. But no one thing is best for everyone. So back then [Never10](#) was created to return power and control to where it should be: in the hands of individual Windows users.

Now it's "InControl"

For many years, Microsoft led the world to believe that Windows 10 would be the final version of Windows. That sounded good to people who just wanted to use Windows to get their work done. Then Microsoft decided that they would create "feature release" updates to give Windows an evolving set of features. Many people just wanted Microsoft to leave Windows alone and fix its bugs. But once again, Microsoft believed that it knew best. So these "feature release" updates became
