try this technique

<https://www.forbes.com/sites/gordonkelly/2020/02/04/how-to-upgrade-to-windows-10-for-free-in-2020/#7fa4773775ff>

1. Click on the Windows 10 download page link [here](#)
2. Click '*Download Tool now*' - this downloads the Windows 10 Media Creation Tool.
3. When finished, open the download and accept the license terms
4. Choose: '*Upgrade this PC now*' then click 'Next'
5. Choose '*Keep personal files and apps*'
6. Click '*Install*' (note this takes some time and involves multiple restarts)
7. Once installed, open: *Settings > Windows Update > Activation* to activate your Windows 10 digital license...
8. OR enter your (genuine) Windows 7 or Windows 8/8.1 product key if you haven't previously activated your old version of Windows

If you'd like to check your license has successfully been activated afterwards, open:
Settings > Update & Security > Activation.

Windows 7 -> Windows 10

ANTI MALWARE TESTFILE

TRUSTWORTHINESS 

response to a request from an unknown person is simply to decline politely.

A third set of requests come from exactly the people you might think would be least likely to want viruses „users of anti-virus software“. They want some way of checking that they have deployed their software correctly, or of deliberately generating a „virus incident in order to test their corporate procedures, or of showing others in the organisation what they would see if they were hit by a virus“.

Reasons for testing anti-virus software

Obviously, there is considerable intellectual justification for testing anti-virus software against real viruses. If you are an anti-virus vendor, then you do this (or should do it!) before every release of your product, in order to ensure that it really works. However, you do not (or should not!) perform your tests in a „real“ environment. You use (or should use!) a secure, controlled and independent laboratory environment within which your virus collection is maintained.

Using real viruses for testing in the real world is rather like setting fire to the dustbin in your office to see whether the smoke detector is working. Such a test will give meaningful results, but with unappealing, unacceptable risks.

Since it is unacceptable for you to send out real viruses for test or demonstration purposes, you need a file that can safely be passed around and which is obviously non-viral, but which your anti-virus software will react to as if it were a virus.

manufacturer/vendor of your AV scanner to seek such help.

Download area using the standard protocol HTTP

– Sorry, HTTP download ist temporarily not provided. –

Download area using the secure, SSL enabled protocol HTTPS

---------------------------------------	---	--	--

How to delete the test file from your PC

We understand (from the many emails we receive) that it might be difficult for you to delete the test file from your PC. After all, your scanner believes it is a virus infected file and does not allow you to access it anymore. At this point we must refer to our standard answer concerning support for the test file. We are sorry to tell you that EICAR cannot and will not provide AV scanner specific support. The best source to get such information from is the vendor of the tool which you purchased.

Please contact the support people of your vendor. They have the required expertise to help you in the usage of the tool. Need less to say that you should have read the user's manual first before contacting them.
