Apple Adopts New Formats for Photos & Videos

HEIF - High Efficiency Image File Format HEVC - High Efficiency Video Coding

- Developed by Moving Picture Experts Group not Apple
- These formats will become the industry standard
- They compress your pics and videos to 1/2 size of JPEG/ MOV
- Handles a 10-bit color range vs 8-bit for JPEG
- iOS 11 does not convert your old images, only images and video taken with iOS 11 and...
- iPhone/iPad must have A10 Fusion chip to take HEIF
 - iPhone 7 or 7 plus
 - 10.5-inch iPad Pro
 - 12.9-inch iPad Pro (2nd Generation)
- Older iPhones and iPads may have difficulty viewing HEVC videos
- By default, HEIF pics and vids are converted to JPEGs when exported to older iOS and macOS editions, non-iOS devices or apps which don't support HEIF
- Will there be hiccups? No doubt, but the changeover should be fairly transparent to most of us.
